Education

Carnegie Mellon University

Statistics and Machine Learning, 3.88 GPA

Jackson High School

Valedictorian, 4.0 GPA

Pittsburgh, PA

Aug 2025 – Present

Jackson, MI

Aug 2021 – May 2025

Work Experience

Orbitform — IT and Data Analytics Intern

Full Time

Jackson, MI

May 2026 – Aug 2026

- Built an n8n and Python workflow that uses web scraping and AI agents to analyze prospect companies. Accomplishes this by using a text analysis libraries (Beautiful Soup, Natural Language Toolkit), then matches descriptions using MySQL text search on historical records.
- Created a web tool for the spare parts and tooling team that identified repeat customers that are overdue to order using BG/NBD modeling.
- Analyzed company-level stock, revealing over \$100,000 in dead inventory; proposed adjusting lead times (which were manually entered to predict when we should order more of an item) using historical data to limit inventory.

Lean Rocket Lab — Website Development Intern

Part Time

Jackson, MI

May 2026 – Aug 2026

- Used Cursor to create an interactive display board for members to access resources, register for events, and more. In admin settings, it uses a grid layout to allow manipulating how large different resources are displayed. Allows for adding different themes, web pages, timers, etc.

Resale Depot — Data Science Intern

Part Time

Jackson, MI

Sept 2024 – May 2025

- Created an Arduino Giga R1 display tool to upload donation data to a spreadsheet with timestamps
- Performed data analysis with Python, Pandas, and Google Spreadsheets on historical economic church data.

Projects

CMU Sports Analytics

- *NBA Expansion Draft*: Room winners for the Syracuse Basketball Analytics Competition by analyzing the NBA expansion draft using min-max normalized advantage metrics, expected points, and actual points data in Python with Pandas and Pyplot. Then we analyzed how the team should play (via specific offensive/defensive patterns) based on data, as well as projecting financial/team performance with a five year outlook — [Presentation](#), [Code](#)
- *NFL Two-High Coverage*: Analyzed two-high coverages at the Syracuse Football Analytics Competition in Python with Pandas, Pyplot, and NumPy. Identified the Cross-Hook-Vertical play combination as the most effective against cover 2, while validating this qualitatively via a film study — [Presentation](#), [Code](#)
- *Route Lab*: A football passing-play simulator where users design formation and routes — [Code](#) or [Run in Browser](#)
- *Do or Die*: Used R to analyze the NFL's two-minute drill — [Presentation](#), [Code](#)

Data Acquisition: Carnegie Mellon Racing

- Developed an accessible app to convert binary and MDF files into effective visualizations through Tkinter and Matplotlib

Skills

- **Interpersonal**: Assumption Based Problem Solving, Focused and Efficient Teamwork, Servant-Based Leadership
- **Software**: Python, SQL, Microsoft Excel, DBeaver, C, VIM, Cursor, Claude Code, CodeX
- **Statistical**: Regression, Clustering (K-Means, Agglomeration), Trees, Random Forests, Effective Visualizations

Events

- *GIS Day*: Analyzed the correlation of mental health in California on the potential explanatory factors of physical health, drinking habits, income, and Gini coefficient using R and ArcGIS mapping software — [Presentation](#)
- *CMU Sports Analytics Conference Attendee and Volunteer*: Presenters from ESPN, Google, and other universities.
- *Veritas Forum Volunteer*: “Is Intelligence Overrated”. Speakers from Yale and Carnegie Mellon.

Leadership Experience

Small Group Leader (InterVarsity), Leadership Team Member (2611 FRC Robotics), Senior President (JHS Student Government), Treasurer (JHS National Honor Society) Co-Captain (JHS Varsity Soccer), Co-Founder (JHS Bible Study), Co-Founder (Interwoven Bible Study), AV Co-Director (Rivertree Church)
